

DB Soiu

Director of Information Technology

DB Soiu is the Jim Joseph Foundation's Director of Information Technology and is responsible for every aspect of the Foundation's technology needs.

He first worked with Interland, the real estate company founded by Jim Joseph, as a technology consultant in 1992. He then brought his experience and skills as a full-time Interland employee in 1995.

DB continued to work with Interland and established the IT infrastructure when the Jim Joseph Foundation was formed in 2005. His focus today is wholly directed toward the Jim Joseph Foundation, as Interland closed its operations. Twenty-eight years working passionately for both Interland and the Foundation has given DB a unique understanding of what is needed to continue the growth and development of the Foundation's core values and principles.

His many years working reflects his passion and love for technology that continues to add to the success of the Jim Joseph Foundation.
